

BUBBLETONE

BLOCKCHAIN IN TELECOM

www.bubbletone.io

The first decentralized telecom ecosystem.

Allows mobile network operators, phone users and service providers to interact directly.

Eliminates roaming costs & offers additional revenue streams.

Users

- Make calls and use data during travel worldwide at great local rates with direct connection to local operators
- No need to change your SIM-card or phone number
- Next generation messenger packed with amazing communication features

Operators

- Any operator can become global without complex network integrations
- Direct access to international telecom market with millions of new customers
- Increase in revenue through distribution of value-added services

Vision

We directly connect mobile network operators and end users globally on our blockchain-based marketplace. As a mobile operator in Europe with over 20 years in telecom, we are going to leverage this blockchain platform to enter the global market and offer it to all operators.

Problem

International roaming now means prohibitive expenses both for telecoms and subscribers around the world. Inter-operator charges for entering roaming market now exceed \$20 million. Developing countries are most hit from exceptionally high roaming prices in a market dominated by a few telecom giants.

Solution

With BubbleTone Blockchain, travelers can swiftly become legitimate local customers of any foreign operator in the country they are traveling to. They don't need to replace their SIM card, and they retain their home number.

Global Market for Mobile Traffic and Roaming

OUR MARKET

1,000+ small & medium-sized operators
10,000 online service-providers
1,3 billion travelers a year

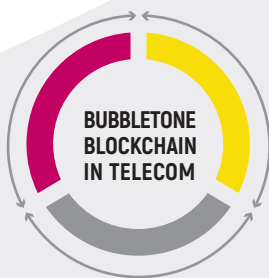

Traditional roaming market is huge, but failing:

According to research, 71% of all roamers globally remained silent, with just 1% of subscribers consuming 80% of all traffic in roaming. This costs the telecoms industry billions in lost revenue.

Operator revenues will fall 11% in 2017 globally. Average revenue per user less than 75% of its 2015 value.

End user

- Direct link to local mobile network during travel
- Directly buys from global value-added service providers

Value-added service provider

Selling online services directly to mobile customers globally

Mobile network operator

Directly servicing foreign customers traveling in their country

Any mobile carrier can publish prepaid plans as smart contracts on BubbleTone Blockchain. These offers are visible to all other operators and their subscribers. When subscriber selects offer, a new smart contract is created with the subscriber's digital identity and payment transaction directly to foreign operator.

BubbleTone Mobile App:

- Marketplace connecting subscribers and local network operators globally
- Messaging & lifestyle app customizable for operators' needs and content delivery

The Token

UMT - Universal Mobile Token.

- Will be sold at the ICO with a capacity of listing on crypto exchanges.
- Limited amount to be issued.

FUNCTION: Used in smart contracts to perform transactions. - Can be used to top up user balance to pay for telecom services.

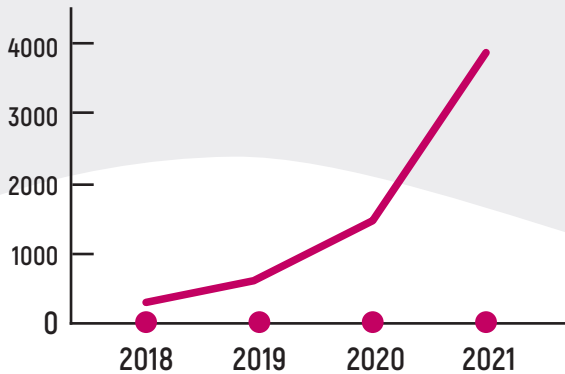

ICO Timeline

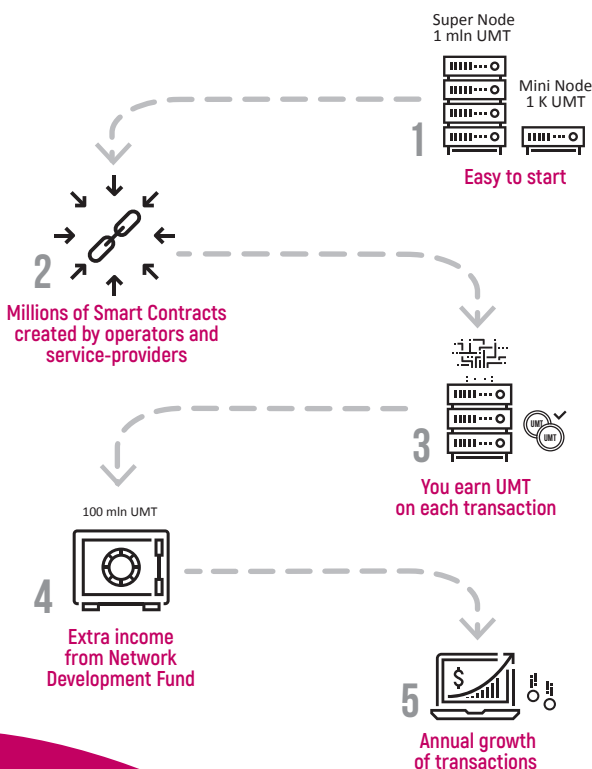

Thousands of Service providers can join BubbleTone Blockchain Ecosystem

Every interaction between users, operators and service providers creates new smart contract in BubbleTone ecosystem. The potential is over 1 000 000 000 smart contracts by 2020.

Number of Transaction (millions)

We offer investors to become node holders and earn revenue from processing smart contracts on BubbleTone Blockchain.

Our Team:

Yuri Morozov

Founder of 4 active telecom companies, with \$50M annual revenue

Sergei Ivanov

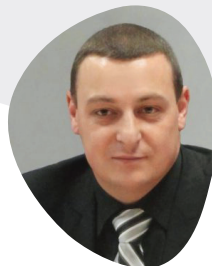

CEO of "Allo Incognito" (mobile virtual network operator)

Oleg Pravdin

Telecom visionary, founder of 3 start-ups in the USA, China and Russia

Our Advisors:

Mark Grats

Angel Investor, ex-Apple, Yahoo, HP

Professor Jin Song Dong

Director of the Institute for Integrated Intelligent Systems, Griffith University, Australia

David Drake

Managing Partner at LDJ LP Fund Investments
Crowdfunding pioneer, Crypto investor
